

AERATOR BARRIER UPDATE

The aerator barrier install took place Saturday 12/31/2022 at 8:00 am. Due to weather reasons this was done on a last minute plan after the previous scheduled date was canceled. Unfortunately this did not allow us to inform all members so that anyone who wanted to volunteer to help could attend. This task took about 2.5 -3 hours to complete due to very slippery conditions. The starter holes were drilled along the airlines to aid in the open water process then the pump was turned on. The ice along the airlines was dissolved and opened up Sometime before Monday morning. Thanks to the people who were able to help install the barrier on short notice; Mike Braunreiter, Steve Motiff, Pat Larscheid, Jay Barta, Chris Dockry, and Marty Thyssen.
